

Install and Configure Apache Tomcat Server

Download Apache Tomcat (Version 10+)

- Go to <https://tomcat.apache.org/download-10.cgi>.
- Download the latest **Tomcat 10.x** (zip or tar.gz).
- Extract it to a location (e.g., C:\apache-tomcat-10.1.XX).

Configure Tomcat in Eclipse

1. **Go to Eclipse → Window → Preferences → Server → Runtime Environments.**
2. **Click Add → Select Apache Tomcat v10.0 → Next.**
3. **Browse and select the Tomcat installation directory (where you extracted Tomcat).**
4. **Click Finish.**

Deploy and Run

1. **Right-click Project → Run As → Run on Server.**
2. **Choose your configured Apache Tomcat 10 server → Finish.**
3. **URL Example:**
`http://localhost:8080/servlet-demo/hello`
